

## Press release

# Personnel changes in the management of LUNOS

Berlin, March 1, 2026 – LUNOS Lüftungstechnik GmbH & Co. KG, a manufacturer of indoor air systems, has announced a change in personnel. Michael Merscher, the company's long-standing technical director and member of the management board, will be moving on to new professional challenges and leaving LUNOS at his own request on February 28, 2026, after 16 successful years with the company. At the same time, the position of technical director will be filled seamlessly.

Under Michael Merscher's leadership, existing products were continuously optimized, new technologies were brought to series production readiness, and internal processes were constantly improved. Of particular note is his key contribution to the development and successful market launch of the e<sup>2</sup> series, which is now considered a milestone in the product history of LUNOS and has positioned the company sustainably in the market.

Michael Merscher has thus had a significant influence on the technological development of the company and played a decisive role in shaping it. His work has strengthened the competitiveness and future viability of the company in the long term. He remains associated with the company through his latest major project, the development of the AI "LUISA."

Michael Merscher

Michael Steckenborn

At the same time, LUNOS is setting the course for continuity and stability in technical management: On March 1, 2026, Michael Steckenborn, currently Head of Research & Development, will take over the position of Technical Director. He has been with the company for 14 years and has extensive knowledge of the products, technologies, and internal structures.

In his previous role, he was primarily responsible for the further development of the product portfolio and numerous innovation projects, and made a decisive contribution to the technological orientation of the company.

With his many years of experience, his deep technical understanding, and his close ties to the company, he is ideally suited to continue the successful work of his predecessor and to drive forward technical development at LUNOS in a future-oriented manner.

With this orderly handover of technical management, the company considers itself to be well positioned and looks ahead to the coming years with confidence. At the same time, this change opens up opportunities to boldly implement new ideas, drive innovation, and lead the company's successful course into a dynamic and promising future with fresh energy.

We wish both gentlemen all the best in their new roles.

### About LUNOS

Founded in 1959, LUNOS Lüftungstechnik GmbH & Co. KG is the global market leader in decentralized home ventilation. The company develops and manufactures innovative ventilation systems with and without heat recovery, as well as smart home solutions and a wide range of accessory components.
