LUNOS ensures safety under building law despite the elimination of the obligation to obtain general building approval

Berlin, 11.06.2025 – The legal framework for ventilation units in Germany is changing: with the revised model administrative regulation Technical Building Regulations (MVV TB) and the Model Building Code (MBO), the obligation under building law to obtain general building authority approval (abZ) for many ventilation systems will no longer apply in future. However, concrete implementation by the federal states is still pending.

LUNOS Lüftungstechnik is taking a proactive approach here: all existing abZs have been extended and new approvals for upcoming products have already been applied for. In this way, LUNOS is ensuring that planners, architects, fabricators and building owners continue to enjoy maximum security under building law – even during the transitional phase in which implementation into national law is still pending.

„We want our partners to be able to rely on us even in uncertain times. The extension of our abZ is a clear sign: LUNOS stands for reliability and future security - even beyond regulatory changes," says Michael Merscher, Technical Director and Member of the Management Board of LUNOS Lüftungstechnik.

"We are particularly pleased to announce that four of our products have once again received general technical approval from the German Institute for Building Technology (DIBt):

- [e²60](#) with approval until September 2026
- [e²60short](#) with approval until April 2028
- [Silvento-ec](#) exhaust fan (newly approved up to 90 m³/h, approval until Mai 2030)
- [LUNOtherm](#) facade elements, approved until Mai 2030

In particular, the newly confirmed on-site calibration capability of the Silvento-ec – including height adjustment – opens up new application possibilities in the field of flexible exhaust air solutions.“

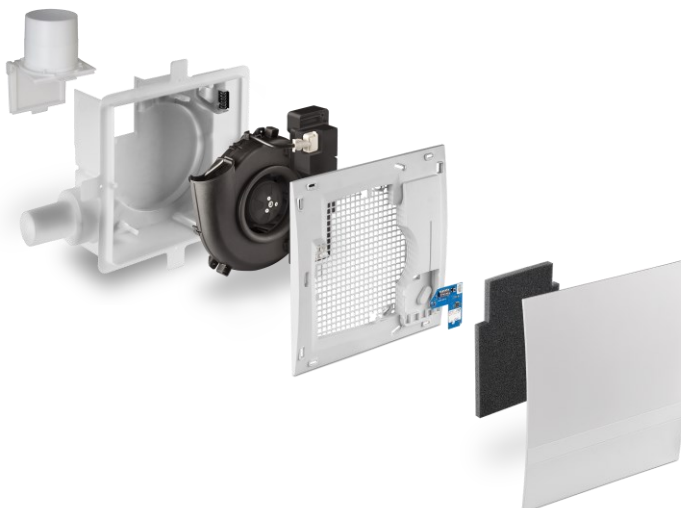

About LUNOS

Founded in 1959, [LUNOS Lüftungstechnik GmbH & Co. KG](#) is the global market leader in the field of decentralised home ventilation. The company develops and produces innovative ventilation systems with and without heat recovery as well as smart home solutions and a wide range of accessory components. LUNOS serves customers worldwide and stands for high quality, energy efficiency and comfort.
