

LUNOS

WIRELESS SYSTEM

The LUNOS wireless system is an independent system that transmits bidirectionally with 868 MHz. The 5/UNI-RF, 5/SC-RF and the wireless screens from the e⁹⁰-RF, e⁹⁰60-RF and the 9/IBF-RF can be linked via the integrated LUNOS wireless modules and can be connected via the UNI-EO module to the Smart Home control center from homee or to other Smart Home systems.

Wireless screen 9/IBF-RF

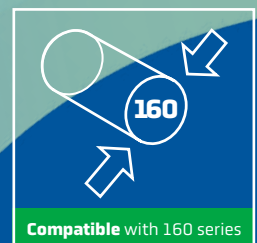

Designer screen for the living area with universal control RF technology, featuring a standard integrated LUNOS wireless module and 230 V power supply unit

e⁹⁰-RF & e⁹⁰60-RF with Wireless screen

Supply and exhaust air in one unit with the sensor and control technology of the universal control RF integrated in the inner screen of the e⁹⁰-RF and e⁹⁰60-RF with standard integrated LUNOS wireless module and 230 V power supply unit

LUNOS wireless controls are equipped with humidity and temperature sensors as standard. The wireless screens also uses this to check the differences between indoor and outdoor air and adjusts the volume flows accordingly.

Easy installation of the fan or inner screen with the RF module and 230 V power supply. By connecting to a partner device or control unit, only 230 V is required for the fan. Wireless connections to all ventilation devices are possible without any additional cabling. Maximum flexibility and comfort are guaranteed!

Compatible with 160 series
